OFFER YOUR YOUNGER ONES
EXTRA PROTECTION FROM MALARIA
WITH SMC

What is SMC?
Seasonal Malaria Chemoprevention (SMC) is a preventive treatment for malaria. It is for children from 3 months to 5 years of age. The medication is given 3 consecutive days each month during the rainy season. SMC is supported by the Ministry of Health.

How does the SMC campaign work?
- A team of community health workers will come to your door.
- They will give the first dose of SMC to your eligible children.
- They will leave behind the doses for Day 2 and Day 3 so that you can give it to the children.
