Scientific Publications Policy

I. General Principles:

a) Prior to publication by a partner, MMV review or approval is needed, in accordance with the terms of the contract.

b) A publication strategy is needed for each project so that:
   - Relevant scientific and medical data are made publicly available to help inform further research and policy discussions
   - Contractual obligations for publications with our partners are followed

c) All MMV publications should be accessible freely and available in the public domain - MMV will pay the cost of publication to journals for open access.

d) Any publications involving disclosure of chemical structures and data should be followed up with the corresponding data being sent and deposited into ChEMBL (open access database).

II. Publication approval

SOP Comms03A explains the approval and tracking of articles for publication in journals.

III. Authorship and acknowledgements

MMV follows Good Publications Practice (GPP). The fact that MMV is funding a project is not sufficient for authorship. MMV holds the responsibility to:

1. Grant all authors (including medical writers) full access to study data before the writing process begins or before first external presentation of the data. This includes study protocols, statistical analysis plans and reports, data tables, clinical study reports and results intended for posting on clinical trial results websites.

2. Provide copies of the MMV’s publication policy to all authors.

3. Avoid premature publication or release of study information.

4. Avoid duplicate publication.

5. Provide protection to parties with intellectual property rights and establish a reasonable period before study results are made public for IPR to be protected.

6. Work with investigators, authors and contributors to report and publish studies in a timely and responsible manner.

7. Review in a timely manner articles and abstracts before these are submitted and share scientific comments with authors.

8. Disclose potential conflicts of interest in all articles and presentations.

9. Identify funding sources in all articles and presentations – and acknowledge MMV’s financial contribution.
10. Ensure appropriate attribution of authorship - based on contribution and input. Authors should meet all three of the following conditions: have made substantial contributions to conception and design, acquisition of data or analysis and interpretation of data; drafting the article or revising it critically for important intellectual content and final approval of the version to be published.

11. Ensure all authors agree on the order in which they appear in an article or presentation and any changes on authorship before submission.

12. Take care to ensure appropriate acknowledgement of the contributions made by medical writers and to describe their funding. Depending on the contributions they make professional medical writers may qualify for authorship.

13. Acknowledge in all articles and presentations all significant contributions made by individuals and organisations.

### IV. Responsibility
