An epic human tragedy, malaria is 100 per cent preventable and treatable, yet kills one child every 45 seconds and over 780,000 people every year.

Today is World Malaria Day

Defeating Malaria Together

New medicines

MMV’s vision is a world in which innovative medicines will cure and protect the world’s poorest people. Through its private public partnerships with governments, non-profit organizations, and industry, we develop and deliver vital medicines that will contribute to the ultimate defeat of malaria.

Defeating Malaria Together

WMD 1

Malaria Day

The Global Fund to Fight AIDS, Tuberculosis and Malaria provides 76 per cent of all malaria funding worldwide.

From 2002 to 2010, the fund enabled recipient governments to distribute 160 million insecticide-treated nets and treat 170 million cases of malaria. Last year, the organization began operating the Affordable Medicines Facility – malaria in 11 countries, to increase access to malaria treatments and delay antimalarial drug resistance.

In 2010, donor pledges lifted $1.7 billion to fund the Global Fund’s $3.1 billion malaria grant for fiscal year 2011, a substantial increase from the $1.4 billion pledged in 2009. The fund is expected to scale up its contribution to $2.3 billion for fiscal year 2012.

Global malaria accounts for 20 per cent of all childhood deaths. To fight this disease, the distribution of insecticide-treated mosquito nets – like the ones being delivered by truck and by hand above – is a key solution.
